DETAILED ACTION

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 6, 7, 19 and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Ahn.

There is disclosed in Ahn a chafer comprising: a support frame 15; a food service pan 25; a cover 32; a cover pivoting assembly 33; wherein the cover has a peripheral edge, the support frame being arranged for releasably supporting the pan therein and for mounting the cover over the pan to enable the cover to be pivoted about a horizontal axis from a fully closed position (peripheral edge of the cover is oriented in a generally horizontal plane), through an intermediate partially open position (peripheral edge of the cover is oriented in a plane at approximately an obtuse angle), to a fully open position (peripheral edge of the cover is oriented in a plane at a larger obtuse angle), and vice versa, the cover pivoting assembly being arranged to enable the cover to be automatically held stable in the fully open, partially open or fully closed positions, the cover automatically returns to its closed position from a plane between the fully closed and partially open positions; and heating members 84 mountable on the frame.

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Art Unit: 1761

Claims 1, 2, 4, 6, 7 and 22 are rejected under 35 U.S.C. 102(a) as being anticipated by Sambonet et al.

There is disclosed in Sambonet a chafer comprising: a support frame 11, a food service pan 13, a cover 14, a cover pivoting assembly 19, 20; wherein the cover has a peripheral edge, the support frame is arranged for releasably supporting the pan therein and for mounting the cover over the pan to enable the cover to be pivoted about a horizontal axis from a fully closed position through an intermediate partially open position to a fully open position, and vice versa, the cover pivoting assembly being arranged to enable the cover to be automatically held stable in all positions (col. 2, lines 20-24); and cover mounting means 17, 18 for preventing the cover from being removed from the support frame if the cover is in any position other than the fully closed position.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ahn.

Ahn teaches that the angle of the cover in the partially open and fully open positions can be of a variety (page 4). It would have been obvious to one skilled in the art to mount the cover at the claimed angles, since Ahn states that such a modification would be possible.

Allowable Subject Matter

Art Unit: 1761

Claims 8-18, 21, 23 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patent to Dohrmann discloses the use of a trunnion is association with a cover member.
